Course Description	<p>“...to imagine a language means to imagine a form of life.” Ludwig Wittgenstein</p> <p>Introduction to Language Concepts offers students an introduction to language by viewing similarities and differences among various languages from both a humanist and a scientific point-of-view. The human species is most aptly described as the language-speaking species because human uniqueness, among all other life forms, abides most significantly with language. Without language, the study of any discipline would not be possible.</p> <p>This course will consider questions like the following: What is language? What does it mean to know a language? Why is 80% to 90% of our linguistic knowledge totally unconscious? What is the relationship between language and the brain and, therefore, between language and thought? In what ways do people acquire their first language?</p> <p>It is safe to assume that students who have completed this course will never think about language in the same way again. The study of language is a window into the human mind and into who we really are. As always, this syllabus reflects the expression of students on course surveys who want interactive, challenging but clear, and fairly assessed instruction.</p>
Class plan based on course evaluation from previous academic year	<p>Based on previous academic years' course evaluation, covering the three areas of morphology, syntax, and phonetics was very helpful in developing students' linguistic knowledge and preparation for future linguistic courses. Therefore, the emphasis will be again on these three areas.</p>

Course related to the instructor's practical experience (Summary of experience)	My main practical experience is familiarity with several languages. I will apply the know-how I have gained to the course.
Learning Goals	<p>By the end of the course, students should be able to:</p> <ul style="list-style-type: none"> <li>· examine the nature of human language through detailed study, critical thinking, and systematic analysis.</li> <li>· find and explain the structure of words.</li> <li>· diagram the internal structure of sentences.</li> <li>· explain the meaning of meaning.</li> <li>· transcribe words from other languages more precisely.</li> <li>· derive pronunciation rules from raw data.</li> <li>· explore how society shapes and is shaped by language.</li> <li>· describe how children acquire their native language(s) naturally without instruction or teaching.</li> <li>· understand the innate creativity of language, and answer the question: how can humans create an infinite number of sentences from a finite set of rules?</li> <li>· solve a variety of linguistic problems in morphology, syntax, phonetics, and phonology.</li> </ul>
