Department	International College of Liberal Arts	International College of Liberal Arts	
Semester	Fall 2024	Year Offered (Odd/Even/Every Year)	Every Year
Course Number	PSYC150	·	
Course Title	Introduction to Psychobiology	Introduction to Psychobiology	
Prerequisites	None		
Course Instructor	Fong Chun Yuen	Year Available (Grade Level)	1
Subject Area	Psychology	Number of Credits	3
Class Style	Lecture	Language of instruction	English

(NOTE 1) Depending on the class size and the capacity of the facility, we may not be able to accommodate all students who wish to register for the course

Course Description	Psychobiology is a psychology foundation course that emphasize in the importance of brain and biological process in the understanding of human behaviour. This module intended to introduce and overview the evolution of behaviour, organization of nervous system, neural plasticity, hormonal responses and their role in perception, sleep and mental illness.
Class plan based on course evaluation from previous academic year	For every semester, this course will be evaluated and reflect upon student course evaluation and feedback.

Course related to the instructor's practical experience (Summary of experience) The main goal of this module is to help the students (i) to gain a basic understanding of the structure and functions of the brain and nervous system, (ii) to understand the underlying physiological/biological processes in human behaviour, (iii) to understand how to apply psychobiological principles to other areas of psychology, (iv) to critically evaluate the impact of psychobiological research to our understanding of behaviour.		(b)
functions of the brain and nervous system. (ii) to understand the underlying physiological processes in human behaviour. (iii) to understand how to apply psychobiological principles to other areas of psychology. (iv) to critically evaluate the impact of psychobiological research to our understanding of behaviour. Learning Goals	Course related to the instructor's practical experience (Summary of experience)	Not applicable
TOTAL DE LE CONTROLLE CONT	Learning Goals	functions of the brain and nervous system, (ii) to understand the underlying physiological/biological processes in human behaviour, (iii) to understand how to apply psychobiological principles to other areas of psychology.

iCLA Diploma Policy	DP1/DP2
---------------------	---------

iCLA Diploma Policy

(DP1) To Value Knowledge - Having high oral and written communication skills to be able to both comprehend and transfer knowledge (DP2) To Be Able to Adapt to a Changing World - Having critical, creative, problem-solving, intercultural skills, global and independent mindset to adopt to a changing world

(DP3) To Believe in Collaboration - Having a disposition to work effectively and inclusively in teams

(DP4) To Act from a Sense of Personal and Social Responsibility - Having good ethical and moral values to make positive impacts in the world

Plagiarism Policy	Class participation and assessments are integral to the academic process. In addition to traditional exams, students will be assessed on their interactive participation within the classroom setting. For their preparation and during class discussions, students are actively encouraged to utilize generative AI tools, such as ChatGPT. However, it's crucial to note that the use of ChatGPT or similar tools is strictly prohibited for in-class written assignments. Upholding academic integrity is paramount. Any form of cheating during exams, which includes actions like sharing answers with peers, using unauthorized materials, or any conduct that disrupts the exam's integrity, will be treated as a grave offense. Offenders can expect a score of zero for the compromised assessment.
